教學目標 與內容		內容" The main purpose of this course is to make students study more English, and major in the higher level and promote the basic English. Because this is a general English course, so the students should prepare and practice it to increase English reading ability and vocabulary development by using the "Cause &Effect" to prepare against the demand of the on-the-job field in the future. Because the range is very wide, so try one's best to simplify the course contents and must enable the students to understand and learn by heart, so that the on-the-job field can be done in an expert way.
